Maximum application per day = 50g
Maximum dose per week = 150g

Indications
- IODOSORB is used for the topical treatment of persistent weeping wounds such as leg ulcers.
- When applied to the wound, IODOSORB has shown to disrupt and substantially eradicate mature biofilms.
- IODOSORB has a high absorption capacity and is an effective deslougher, helping to cleanse the wound bed for effective healing.
- IODOSORB speeds up the healing process and reduces pain.
- Can be used for up to 3 months in a single course of treatment.

Applying IODOSORB Paste
1. Choose a suitable size of dressing for the wound. 5g for wounds up to 6cm x 4cm 10g for wounds up to 8cm x 6cm 17g for wounds up to 10cm x 10cm
2. Cleanse as per your facility’s protocol.
3. Remove the carrier gauze on one or both sides of the IODOSORB Paste.
4. Apply IODOSORB Paste to wound surface. IODOSORB Paste can be molded or cut to fit wound. Any remaining product should be discarded.
5. Apply the cover dressing. The cover dressing chosen should be one that maintains a moist wound environment.

Applying IODOSORB Ointment
1. Cleanse as per your facility’s protocol.
2. Spread IODOSORB Ointment in 3mm thick to cover dressing or directly to wound. After application, the remaining contents of the tube should be discarded due to loss of sterility.
3. Position the prepared cover dressing onto the wound.
4. When managing venous stasis ulcers, compression bandages should be used in addition to IODOSORB Ointment.
5. Apply the cover dressing. The cover dressing chosen should be one that maintains a moist wound environment.

Changing IODOSORB Paste
1. IODOSORB Paste should be changed when saturated with wound fluid, indicated by a loss of color, usually 2-3 times a week or daily if wound is discharging heavily.
2. Soak dressing for a few minutes with sterile water or saline, then remove.
3. Gently and thoroughly remove any Iodosorb at each dressing change.
4. Gently blot excess fluid, leaving the wound surface slightly moist, before re-applying IODOSORB Paste.
5. Apply the cover dressing. The cover dressing chosen should be one that maintains a moist wound environment.

IODOSORB Paste
- Code 66060633 bx / 5 drsgs 5g 4cm x 6cm
- Code 66060634 bx / 3 drsgs 10g 6cm x 8cm
- Code 66060635 bx / 2 drsgs 17g 8cm x 10cm

IODOSORB Ointment
- Code 66060630 bx / 4 tubes 10g tube
- Code 66060631 bx / 2 tubes 20g tube
- Code 66060632 bx / 1 tube 40g tube

IODOSORB Paste and IODOSORB Ointment usage guide

More changes would exceed the maximum amount of iodine allowed and therefore should not be carried out.
A single course of treatment should not exceed 3 months.

Applying IODOSORB Paste
1. Choose a suitable size of dressing for the wound. 5g for wounds up to 6cm x 4cm 10g for wounds up to 8cm x 6cm 17g for wounds up to 10cm x 10cm
2. Cleanse as per your facility’s protocol.
3. Remove the carrier gauze on one or both sides of the IODOSORB Paste.
4. Apply IODOSORB Paste to wound surface. IODOSORB Paste can be molded or cut to fit wound. Any remaining product should be discarded.
5. Apply the cover dressing. The cover dressing chosen should be one that maintains a moist wound environment.

Applying IODOSORB Ointment
1. Cleanse as per your facility’s protocol.
2. Spread IODOSORB Ointment in 3mm thick to cover dressing or directly to wound. After application, the remaining contents of the tube should be discarded due to loss of sterility.
3. Position the prepared cover dressing onto the wound.
4. When managing venous stasis ulcers, compression bandages should be used in addition to IODOSORB Ointment.
5. Apply the cover dressing. The cover dressing chosen should be one that maintains a moist wound environment.

Changing IODOSORB Paste
1. IODOSORB Paste should be changed when saturated with wound fluid, indicated by a loss of color, usually 2-3 times a week or daily if wound is discharging heavily.
2. Soak dressing for a few minutes with sterile water or saline, then remove.
3. Gently and thoroughly remove any Iodosorb at each dressing change.
4. Gently blot excess fluid, leaving the wound surface slightly moist, before re-applying IODOSORB Paste.
5. Apply the cover dressing. The cover dressing chosen should be one that maintains a moist wound environment.

Changing IODOSORB Ointment
Each time the dressing is changed, the remaining IODOSORB Ointment should be gently washed from the wound or ulcer surface with a suitable cleansing solution (sterile water or saline) or with a sterile, wet swab.
