New ALLEVYN Gentle Border Multisite has a unique tri-lobe design making it the dressing of choice when dressing awkward body areas.

A recent volunteer trial found the ALLEVYN Gentle Border Multisite had better conformability and superior retention than the equivalent Mepilex™ Border square dressing* when dressing awkward body areas such as the knee and elbow.

Start to remove the protector material from the dressing and ensure that the dressing has adhered all around the wound.

ALLEVYN Gentle Border Multisite can be cut. Always use aseptic technique when cutting the dressing. Ensure any exposed foam areas are covered with an appropriate film dressing taking care not to cover the entire dressing.
