Assess patient, wellbeing and wound

Establish diagnosis and baseline characteristics for appropriate support and comorbidities that may impact healing. Record wound type, location, size, wound bed condition, signs of infection / inflammation, pain location and intensity, comorbidities, adherence / concordance to treatment

Control or treat underlying causes and barriers to wound healing

Record referral to others such as surgical team, wound specialist nurse, dietitian, pain team, vascular and diabetes team, podiatrist, physiotherapist, family carers and trained counsellor

Bring in multi-disciplinary team and informal carers to promote holistic patient care

Record management plan for: systemic infection, diabetes, nutritional problems, oedema, continence, mobility, vascular issues, pain, stress, anxiety, non-adherence / concordance with offloading and compression, lifestyle choices

Developed with the support of Glenn Smith

T.I.M.E. clinical decision support tool

Evaluate and reassess the treatment and wound management outcomes

Evaluate: Record wound progression within given timelines. Flag if no change, go back to A, B, C and change treatment where indicated
