Outpatient Joint Experience Team Training

As part of Smith+Nephew’s new Positive Connections+ initiative, **Outpatient Joint Experience Team Training** utilizes a sponsored Visiting Surgeon Program to establish a viable outpatient total joint program in the ASC setting.

The Outpatient Joint Experience Team Training program will provide a comprehensive and immersive curriculum on building a consistent and repeatable outpatient surgery experience for total joint patients.

Each Visiting Surgeon Program site visit is set up independently from Smith+Nephew and gives the attending training center the opportunity to customize the agenda based on the learning needs of the visitors.

The OTJE training will feature:

 Peer-to-peer training for surgeons and anesthesiologists

 Hands-on navigator training to optimize patient selection, communication and data collection

 Patient engagement/education and co-marketing training

 Utilization of emerging technology and patient algorithms to increase throughput and maximize OR efficiency

 Capturing PROMs data
