Is your fixation ROCKTITE™?

Smith+Nephew

REDAPT™
Revision Femoral System
REDAPT® is a 3° tapered titanium stem with proprietary ROCKTITE® distal flutes designed for stable diaphyseal fixation through major and minor splines.

**Major splines**
- Provide axial and rotational stability\(^1\)\(^-\)\(^3\)
- Allow multiple wedges to be formed into the bone to minimize risk of subsidence\(^1,4\)\(^-\)\(^6\)
- Increase in width by 50% from distal to proximal
- Provide 0.25mm press fit

**Minor splines**
- Provide axial and rotational stability\(^1\)\(^-\)\(^3\)
- Allow multiple wedges to be formed into the bone to minimize risk of subsidence\(^1,4\)\(^-\)\(^6\)
- Increase in both width and height from distal to proximal

The combination of patented ROCKTITE flutes and a 3° taper angle minimizes the potential for subsidence\(^4\)\(^-\)\(^6\).

**REDAPT sizing options**

For detailed product information, including indication for use, contraindications, effects, precautions and warnings, please consult the product’s Instructions for Use (IFU) prior to use.
