Simply advanced

The EVOS SMALL Plating System takes an evolutionary approach to simplifying and unifying small fragment plating systems.

www.EVOSsmall.com
Trauma surgery is challenging and ever-changing.

You require the ability to adapt in the OR. Does your implant system give you the flexibility you need?

Are you facing challenges like:

- Incomplete implant systems
- Limited compatibility
- Outdated technology
The EVOS™ SMALL Plating System has evolved with your skillset to meet the demands and expectations of trauma surgery.

The EVOS™ SMALL Plating System takes an evolutionary approach to **simplifying** and **unifying** small fragment plating systems. Plates and screws are designed to give you **stability** where you need it and **flexibility** where you want it.
All inclusive, expansive plating system

The EVOS™ SMALL implant portfolio thoughtfully considers every fracture need. Locking, Non-Locking and Variable Angle Locking Plates are offered to address fixation needs in simple to complex fractures.

**EVOS SMALL Upper Extremity Plates**

- **Proximal Humerus**
- **Clavicle**
- **Distal Humerus**
- **Olecranon**

**EVOS SMALL Lower Extremity Plates**

- **Ankle**
- **Pilon**
- **Proximal Tibia**

- **LOCKING**
- **NON-LOCKING**

Locking straight plate tray

Non-locking straight plate tray
Low-profile constructs

Plates and screws are designed to ensure an overall low-profile construct whether screws are placed on or off-axis.
Simplified

Integrated solutions for fracture fixation

The EVOS® SMALL Plating System offers surgeons the simplicity of one, comprehensive plating system that addresses all of their small fragment surgical needs.

Logically organized instrumentation

2.7mm Instrument Tray

3.5mm Instrument Tray

- 2.7mm Cortex Screws (10-80mm)
- 2.7mm Locking Screws (10-80mm)
- 4.0mm Osteopenia Screws FT (10-80mm)
- 4.0mm Osteopenia Screws PT (26-80mm)
- 3.5mm Cortex Screws (10-90mm)
- 3.5mm Locking Screws (10-90mm)
- 4.7mm Osteopenia Screws FT (10-90mm)
- 4.7mm Osteopenia Screws PT (26-90mm)
Color coding of instruments and trays to match plate and screw fixation options

2.7mm/3.5mm Locking Straight Plate Tray

2.7mm/3.5mm Non-locking Straight Plate Tray

Screw Caddy
- 2.7mm Cortex Screws (10-80mm)
- 2.7mm Locking Screws (10-80mm)
- 4.0mm Osteopenia Screws FT (10-80mm)
- 4.0mm Osteopenia Screws PT (26-80mm)
- 3.5mm Cortex Screws (10-90mm)
- 3.5mm Locking Screws (10-90mm)
- 4.7mm Osteopenia Screws FT (10-90mm)
- 4.7mm Osteopenia Screws PT (26-90mm)

Auxiliary Screw Caddy
- 2.7mm Cortex Screws (6-16mm)
- 2.7mm Locking Screws (6-16mm)
- 4.0mm Osteopenia Screws FT (10-16mm)
- 3.5mm Cortex Screws (6-22mm)
- 4.7mm Osteopenia Screws (10-16mm)
One locking screw

One screw for **threaded locking** and **variable-angle locking**.

</tr>
<tr>
<td>Variable angle options throughout the plate</td>
</tr>
<tr>
<td>• Six tabs engage the locking screw head at angles up to 15° off axis</td>
</tr>
<tr>
<td>Middle slot allows for axial compression if needed</td>
</tr>
<tr>
<td>• Recesses in the shaft for enhanced flexibility to compress plate to bone</td>
</tr>
</tbody>
</table>

Axial compression
Reinforced plate shaft and threaded locking technology provide enhanced stability

Variable angle holes in the metaphyseal region of the plate to enable freedom of plate and screw placement

Low profile in the metaphyseal region where soft tissue coverage can be minimal

Locking hole allows for axial compression if needed

OTA Type A and C Fractures

Multiple metaphyseal fixation options allow for accurate rebuilding and structural support of the articular surface. Small points of fixation allow for fixation in close proximity of the joint to aid in maintaining joint reduction.
