A SIMPLE SOLUTION FOR PATIENT POSITIONING

Lateral decubitus positioning made easy¹

smith&nephew ACUFEX® Access Positioning System
Supporting healthcare professionals
Customize your lateral decubitus positioning needs without complexity

Smith & Nephew’s ACUFEX® Access Positioning System was designed with ease of use in mind. By providing limb abduction, rotation, flexion and optional lateral traction controls, our dedicated system allows you to customize your positioning solution to meet both technique and repair site needs without complexity. This cost-effective, lightweight and stable solution gives you unimpeded access to the repair site. ACUFEX Access puts the control in the surgeon’s hands by providing precise shoulder positioning within the sterile field.

**It’s Easy.**
Simple set up and easy-to-use control points so you can focus on what you do best.

**It’s Modular.**
Optional lateral traction makes both standard and advanced positioning configurations possible all while freeing up staff from supporting the operative arm during procedures.

**It’s Draped.**
System drapes allow for surgeon control and intraoperative adjustments within the sterile field eliminating the need for component sterilization.

The ACUFEX Access Positioning System includes a cart and is portable with a small storage footprint.
Customize your lateral decubitus positioning needs without complexity

Smith & Nephew's ACUFEX® Access Positioning System was designed with ease of use in mind. By providing limb abduction, rotation, flexion and optional lateral traction controls, our dedicated system allows you to customize your positioning solution to meet both technique and repair site needs without complexity. This cost-effective, lightweight and stable solution gives you unimpeded access to the repair site. ACUFEX Access puts the control in the surgeon’s hands by providing precise shoulder positioning within the sterile field.

It’s Easy.
Simple set up and easy-to-use control points so you can focus on what you do best.

It’s Modular.
Optional lateral traction makes both standard and advanced positioning configurations possible all while freeing up staff from supporting the operative arm during procedures.

It’s Draped.
System drapes allow for surgeon control and intraoperative adjustments within the sterile field eliminating the need for component sterilization.

The ACUFEX Access Positioning System includes a cart and is portable with a small storage footprint.

Optional Lateral Traction Boom
Designed to increase access to the repair site. Length and height is adjustable allowing for a range of positions to meet varying patient sizes and surgeon preference.

Abduction Lever
A simple press of the lever allows surgeons and staff to abduct or abduct the arm within the sterile field. Simply rotate and release to stay in a fixed position.

Internal and External Rotation
Our unique, patent pending rotation control allows surgeons and staff to rotate the arm in one fluid motion within the sterile field. Simply rotate and release to stay in a fixed position.

Flexion Control
An easy-to-turn hand control is used to flex and extend the arm.

Cable Management
Take the guess work out with a single point of weight attachment and eliminate the need to tie knots with a reusable cable and hook.

Universal Clamp
Conveniently attaches to any standard OR table while eliminating the need for adaptors.

Ambidextrous, one size disposable kits. Internal padding provides protection of the neurovascular bundle at the wrist. Unique, patent pending design of the hand plate is anatomically shaped for supporting the hand in a relaxed and natural position.

Universal Clamp
Conveniently attaches to any standard OR table while eliminating the need for adaptors.

Overhead Recessed Universal Clamp
Conveniently attaches to any standard OR table while eliminating the need for adaptors.

It’s Easy.
Simple set up and easy-to-use control points so you can focus on what you do best.

It’s Modular.
Optional lateral traction makes both standard and advanced positioning configurations possible all while freeing up staff from supporting the operative arm during procedures.
